

Self-Watering Bucket Planter.

Bucket Planters revisited.... as you may know yours truly came across an article in the publication called *Farm Show*. The article described an easy to make planter using two plastic buckets...further investigation lead to the website :www.pasturemanagement.com where a more complete description of assembling a bucket planter was given. Of course not being satisfied with some of the materials used I went ahead and modified the design making the planter more “sturdy”. To date I have assembled 26 planters, of which I have 8 planters currently growing herbs & vegetables. I plan on putting another 2 planters to use...and the last 10 planters I assembled will be sold at cost (\$12) to members of LIMG.

This is an experiment and so far everyone that has one of these planters seems pleased with the results....let me (and all of us) know how this planter is working for you...those of you that have them....and for the Britcom fans;: “yes Hyacinth it's pronounced BUCKET not bookay!”.....
